

UAIL IT Dashboard

Operational wallboard for Utkal Alumina IT operations. The application aggregates live infrastructure and service-desk telemetry from Nutanix, SolarWinds, and Symphony HSD, then presents it through a single operator dashboard and a separate admin surface.

Attribute	Value
Product	UAIL IT Dashboard
Repository Status	Active implementation
Primary Audience	IT Operations and Tech-Unit IT
Primary Resolution Target	1920x1200 wallboard
Current Documentation Set	docs/README.md
Last Updated	2026-07-17

Runtime Surfaces

- Operator wallboard: `http://<host>:21060/login`
- Admin console: `http://<host>:21061/login`

Core Services

- `dashboard-frontdoor-operator` on `21060`
- `dashboard-frontdoor-admin` on `21061`
- `dashboard-ui` on `127.0.0.1:3001`
- `api-gateway` on `127.0.0.1:4000`
- `nutanix-collector`
- `solarwinds-collector`
- `symphony-collector`

Source Of Truth Rules

- Nutanix is the primary source for HCI-backed server telemetry.
- SolarWinds remains the source for network telemetry and on-prem server telemetry.
- If a Nutanix-backed server loses Nutanix data for more than 10 minutes and SolarWinds data exists, the gateway marks the server as a fallback view sourced from SolarWinds.
- The dashboard must not fabricate normal operating values. On collector failure it continues to show the last successfully synced data and timestamp for that section.

Documentation

The consolidated documentation set is under [docs/README.md](#). For corporate review, use the document register and executive summary pack listed there.

Basic Operations

Build the workspaces:

```
npm run build
```

Start the stack with PM2:

```
pm2 start ecosystem.config.js
```

Save the PM2 process list after validation:

```
pm2 save
```
